

*Let CARE help your pet  
achieve full recovery*

The initial consultation which entails a full two hours with a veterinarian certified in both canine rehabilitation and acupuncture, will include a comprehensive medical exam and history, a quantitative orthopedic and neurological exam, recommendations for medications, supplements, and herbals, in addition to nutritional consultation. We also will create a personalized home exercise program for your pet.

Once your goals have been established, we will then formulate both an at home and in clinic plan for your pet. We work in conjunction with your veterinarians.

*Dr. Waldman, veterinarian, conducting range of motion measurements during an initial evaluation.*

## FAQS

**Q: Do I need a referral from a veterinarian before scheduling an appointment?**

**A:** Many veterinarians will refer patients for various reasons however a referral from a veterinarian is not required. Our facility is operated by veterinarians, in addition to physical therapists certified in canine rehabilitation, therefore it is not necessary. All therapies are managed by staff veterinarians that are in constant communication with your pets' veterinarians.

**Q: May I see your facility? Who do I direct questions to prior to coming?**

**A:** Please contact our reception staff via phone or through our website if you would like a tour of our state of the art rehabilitation center (largest in California) or if you have any questions.

*Ask your veterinarian for  
a referral today!*

for pet therapy.*

# CARE

California Animal Rehabilitation (CARE) offers comprehensive rehabilitation services by combining the education and expertise of on-site veterinarians and licensed physical therapists certified in canine rehabilitation and dedicated to this field. We have a staff of highly qualified professionals that comprise our unique team.

This collaboration of veterinarians managing the medical needs of pets and licensed physical therapists leading therapy not only separates us from anyone in Southern California and beyond, but truly keeps your pet mobile and pain free while we educate you how to best maintain your pet's progress.

Our philosophy is that successful outcomes in pet rehabilitation go far beyond the use of technology, hydrotherapy, and therapy tools. Successful outcomes need a medical approach to problem solving and pain management conducted by professionals.
